

Long Ashton Community Association

The Long Ashton Community Association were granted money to upgrade the village hall in Long Ashton. The project enhanced the hall by fire proofing the stage curtains, improving the stage lighting and enabled the purchase of low energy LED lighting and lighting fixtures. These upgrades mean the hall is able to attract more people to events and enable stage productions, where people can watch in comfort with improved heating and lighting.

The modernization of lighting and heating also reduces energy consumption and lowers the hall's carbon footprint. These improvements have also improved community engagement and helps the hall as a local centre to combat issues of loneliness and social isolation.
