

Spotlight report: vaccinations and immunisations

Immunisations

Population immunisation coverage in North Somerset during the early years is high both for first doses and boosters and compares favourably to regional and national averages. However, it does not always meet the recommended 95% coverage. Immunisations have dropped below the regional and national average from 72.7% in 2019/20 to 68.5% in 2020/21, this result may largely be due to the pandemic. However, the Averages started to increase again in 2022/23.

Type	North Somerset	South West	England
Dtap / IPV / Hib (1 year old)	95.6%	94.4%	91.8%
Dtap / IPV / Hib (2 years old)	96.2%	95.2%	92.6%
Hib / MenC booster (2 years old)	94.0%	92.4%	88.7%
Hib / Men C booster (5 years old)	96.50%	94.90%	92.40%
PCV (pneumococcal infections)	94.70%	94.80%	93.20%
PCV (pneumococcal infections) booster	93.8%	92.5%	88.5%
MMR for one dose (2 years old)	94.1%	92.8%	89.3%
MMR for one dose (5 years old)	96.3%	94.8%	92.5%
MMR for two doses (5 years old)	91.4%	90.0%	84.5%

HPV vaccination

North Somerset has maintained a high population vaccination coverage of the HPV vaccination for one dose (females aged 12-13 years old) at 77.6% in 2021/22. This compares to 68.5% regionally and 69.6% nationally. Coverage is below previous years which has averaged around 90%, this is likely attributable to the pandemic.

Population vaccination coverage - HPV vaccination coverage for one dose (12-13 years old) (Female)
