Published June 2024

Introduction

The Local Authority is required to produce pupil forecasting statistics to identify needs for future provision across the district and inform the strategic planning of school places across North Somerset for the next 5-7 years. This is a complex process that depends on many factors, which can be difficult to predict over time. The model is trend-based using known factors such as birth rates and current school census information. However, some areas are less certain, such as parental choice, school performance, and new housing completions. The last 20 years has seen significant growth in North Somerset and further large-scale development is planned over the next decade, as a result of the Local Plan. The model has been developed over a number of years and is continually refined and enhanced. Department for Education (DfE) analysis showed the level of accuracy of the North Somerset projections was 98.6% for 1 year and 97.8% for 2 years ahead at primary level ; and 99.8% for 1 year ahead and 99.4% for 2 years ahead at secondary level [Local Authority Pupil Forecast Accuracy in North Somerset for 2022].

Pupil Projections Methodology and Assumptions

The model for calculating estimated pupil projections is continually developed. The main reason for introducing refinements to the model has been to better account for pupil yield arising from new housing developments. New developments continue to result in significant growth in the area. The main features of the methodology and assumptions employed to calculate the pupil projections are as follows:

1. Full time reception entry pupils – for September 2023 the projected intake to infant / primary schools is based on the number of allocations already made for each school. The projected intake for subsequent years is based on GP registration data. This gives us figures for the number of pre-school children in each postcode area. Pupils are then assigned to schools by looking at numbers historically opting for each school from each postcode sector. Where projected numbers are greater than the published admission number limit for a school, pupils are assumed to reallocate to other schools within the cluster (also known as a group), having spare capacity. The fifth year Reception intake is based on the average number of children from the preceding 2 years, because these children have not yet been born.
2. Existing pupil numbers in primary and secondary schools moving to next year group – movement from one year to the next is calculated for each school. A factor based on the gains and losses during the previous two years is applied to 6th Form only.
3. Out of area movement into individual schools – this is based on analysis of the previous year's pattern.
4. Demand from new housing – this is established using the North Somerset Residential Land Survey. Schools affected are determined geographically, and the potential intake is modelled accordingly. Estimates of the proportions of potential reception year (YR) pupils moving into a new development from outside or within North Somerset are also used to refine the predictions of additional YR pupils. The development completion schedule is the best estimate at the time the projections were compiled, and the actual rate that new developments are completed and occupied is closely linked to the economic climate and may therefore vary significantly from that expected. Weighting is applied to the expected yield from new developments to account for pupils who do not change school cluster during a house move.

5. Junior school and secondary school intake– apportionment to receiving school is based on the number of pupils moving from one school to another during the previous year. Where projected numbers are greater than the published admission number limit for a school, they are notionally reallocated to other schools in order to determine capacity within the cluster.

6. Denominational school intake– this is also based on historical ratios as above. For reference, the Catholic school figures are shown below the geographical cluster they are located in. They are also shown as a separate cluster but have only been counted once in the total figures.

It should be stressed that the projections are only indicative of likely applications for school places. For instance, where a projection for a school exceeds the capacity of that school, the projection does not imply that the school will be required to admit additional pupils.

Net Capacity and School Places

A school's net capacity (i.e. the number of pupils it can accommodate) is calculated using the DfE national template. Where additional temporary accommodation has been provided in schools to meet demand, or where schools are in the process of change, the additional capacity created may not be reflected in the Net Capacity Assessment figure if an updated assessment has not yet been carried out.

Although a school might have a net capacity of a certain number, it is not uncommon for schools to be organised in such a way that it is able to admit additional pupils. For instance, it is organisationally better for a school with a Net Capacity Assessment of 396 pupils to be organised to admit up to 420 pupils thus resulting in 14 class bases of 30 pupils per class base. This organisational figure is termed the number of 'school places'. The predicted empty places per school in these projections are based on the number of school places. Where schools do not have a net capacity figure this is because they are academies and net capacity assessments do not apply to academies, nursery schools, special schools or pupil referral units. The capacity of academies is based on the number of places the school has agreed to provide as reflected in the school's funding agreement or as subsequently amended.

New Developments

A list of the new developments used in these projections can be found in Appendix 1.

A surplus of 5 and below pupils are shown in a red highlighted box with black text. A deficit of pupils is shown with a red highlighted box and red text.

*As allocation data has been used, it is assumed that YR children from new developments will have applied for a school place and are therefore accounted for.

** The 2027 predicted demand figures are based on an average of 2025 and 2026 demand. A two year average is used because the children in this cohort were not born at the time these figures were compiled.

*** Catholic schools per school is given in the main projections table.

* Negative numbers means more pupils than places i.e a deficit of places. Deficit of places is shown with a red highlighted box and red text. Positive numbers mean surplus of places; if it is a *small* surplus (one to five surplus places) this is black text in a red box; larger surpluses being black text in a white / grey box.

** As allocation data has been used, it is assumed that Year 7 children from new developments will have applied for a school place and are therefore accounted for.
